# SSI CANADA

Thank you SSI Canada for your generous support over the past 3 years! Your contributions to Spongebotics have allowed us to give our all at these competitions, providing an opportunity for our students to soak up new knowledge and experiences!

# STANTEC

Thank you Stantec for your generous support over the past 2 years! Your contributions to Spongebotics have allowed us to give our all at these competitions, providing an opportunity for our students to soak up new knowledge and experiences!

# SANMINA

Thank you Sanmina for your support over the past 2 years! We are grateful for your support and partnership! Your generosity has allowed us to push our limits and soak up new experiences!

# Debrief

## A Sponge-tacular Competition!

Team 7476 participated in the Ontario District North Bay Competition from March 20-22th. In the end, Spongebotics ranked 10th after qualification matches, making it to the playoffs as the 1st pick of Alliance 7. We are currently ranked #53 out of 120 teams in Ontario with 29 district points.

## Fight to the Top

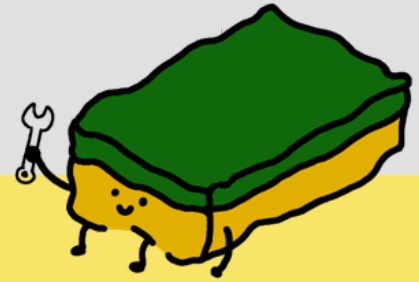

During the competition, 7476 faced technical difficulties in our matches, such as software issues or minor damage from the impact of other robots. Our team would quickly respond to resolve these setbacks, collaborating with other teams in order to bounce back.

## Spawn Makes a Splash!

North Bay marked Spawn's first physical appearance in the world of FIRST. Making appearances with our drive team, in our pit, and in other pictures, he would quickly prove to be a hit to all the participants at the competition. He had a great time meeting the mascots of other teams!

# Business+

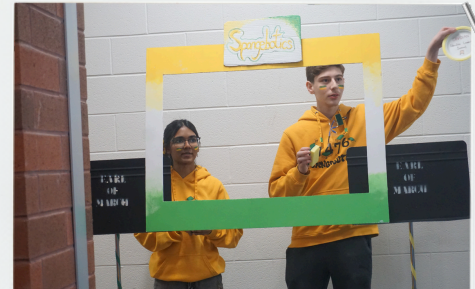

## Sponges for the Win!

We were proud to be the recipients of the Imagery Award in honor of Jack Kamen. This award was presented to us for our original and unique sponge theme. The strong yellow and green colour scheme in our props and accessories created distinct branding, separating our team from the rest.

## Our Impact

Our team applied for the Impact Award, the most prestigious award in FIRST. Leading up to the event, our business team reviewed our presentation in preparation for our judging at North Bay. Spawn and other custom-made props were used to create a compelling story, demonstrating our impact in our community.

## Keeping You Updated

Throughout the North Bay competition, 7476 kept our Instagram up to date with posts of our team's adventures. Make sure to check them out!

# OVERVIEW

# Future Plan

## Strategy

Strategy has been hard at work focusing on scenarios where we would be competing with and against a top scoring alliance. We are also aiming to continue scouting matches of other qualifier events to prepare for our next competition, while changing and improving our scouting app.

## Hardware

Hardware has been working on the intake, alongside further additions to the robot itself. We're planning to construct a new over-the-bumper intake to more efficiently gather fuel. Due to the damage caused to the robot at North Bay, we are repairing minor pieces to ensure readiness for the Niagara Qualifiers.

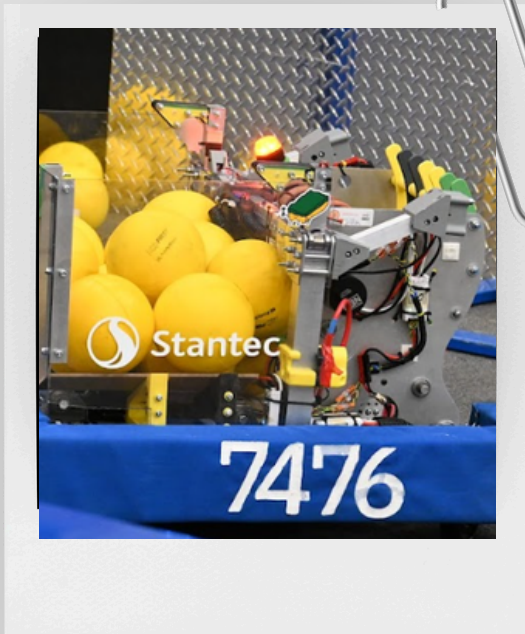

## Controls

We have been retuning the launcher's and intake's code to the new hardware prototype, alongside creating additional autonomous paths. Controls will also be testing the over-the-bumper intake and the new autonomous paths.

# Thank You!

Special thank you to SSI Canada, Sanmina, Stantec, and many other wonderful sponsors. We thank you for your generous contributions to Spongebotics throughout our journey, allowing us to push our team's limits!

Thank you to our generous sponsors!
